

Settings for 888 Poker
<http://poker-bot.org>

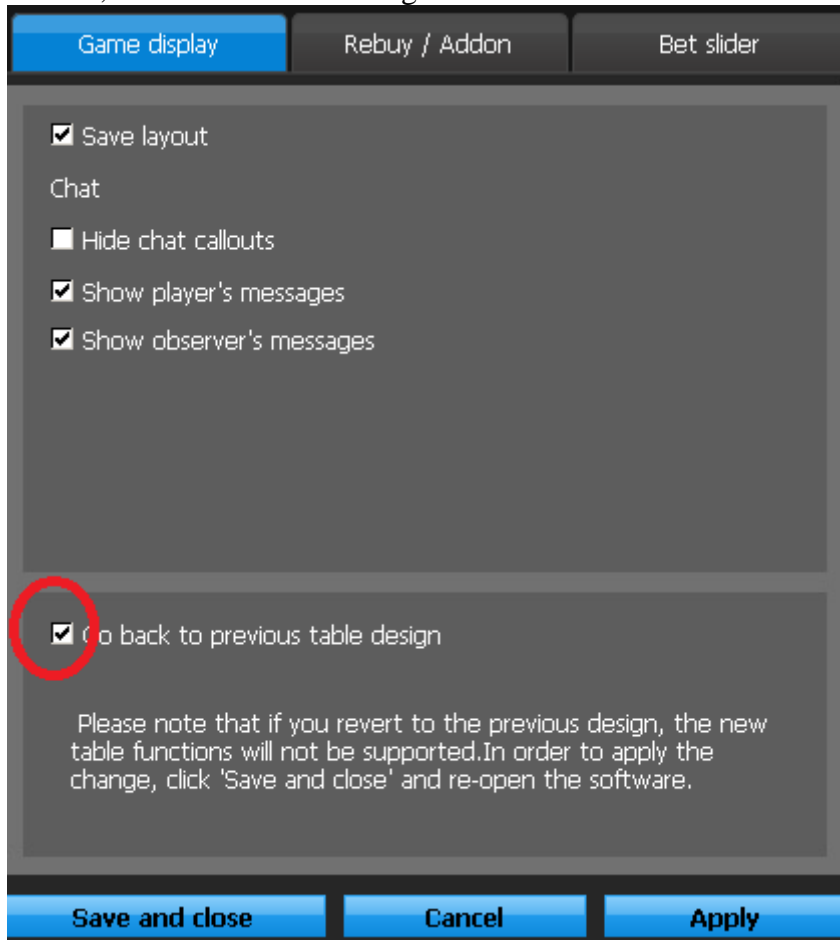

It is especially important to set your Windows Regional Standards and Language Settings exactly like described in Warbot Manual! When you are botting, don't switch Windows language to any other than English.

888 Language should be set to English!

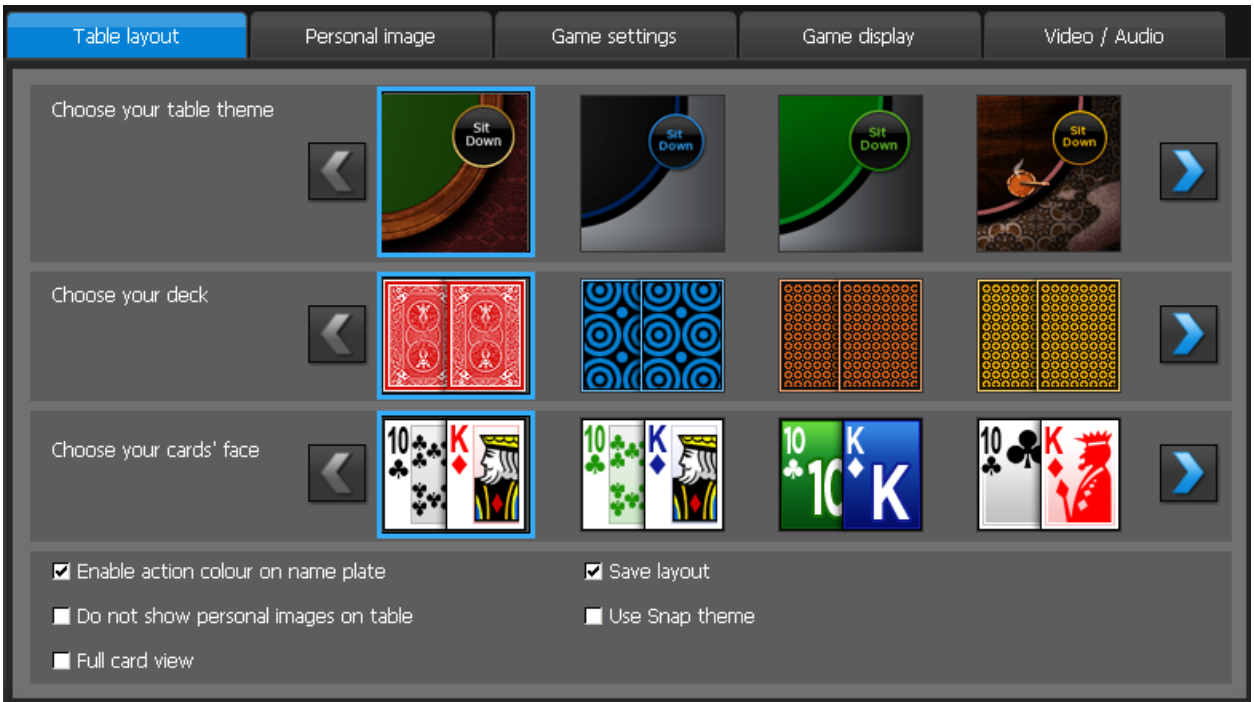

Read <https://forum.warbotpoker.com/viewtopic.php?f=7&t=1052&p=8660#p8660> and install **OLD CLIENT!**

888 client settings

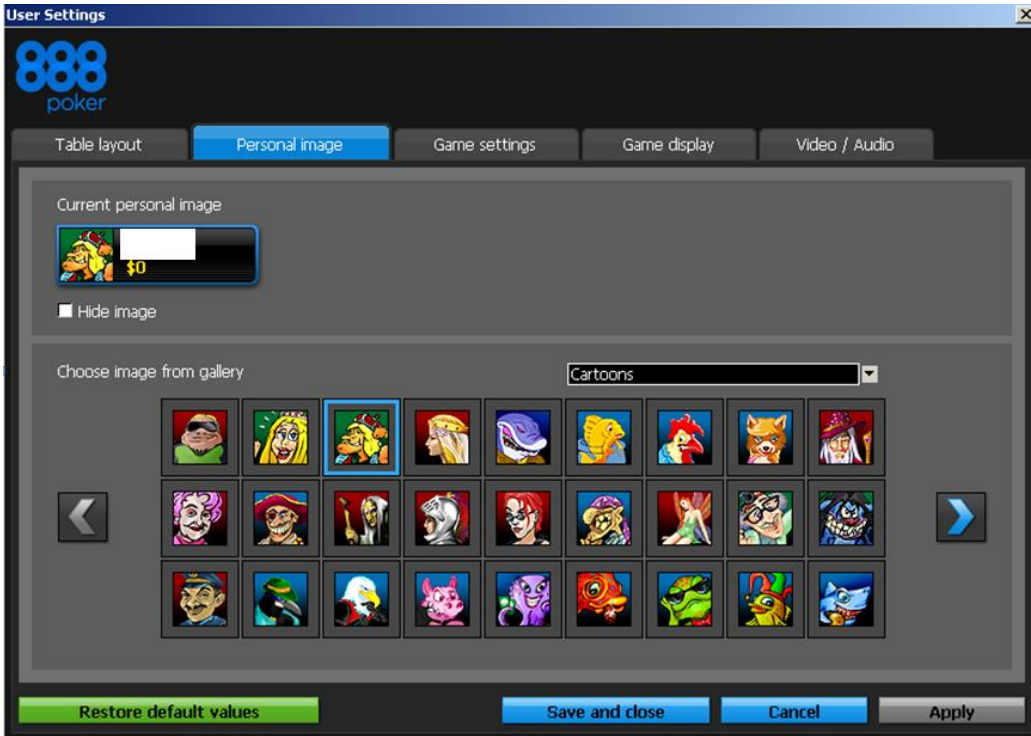

At first, revert to old table design:

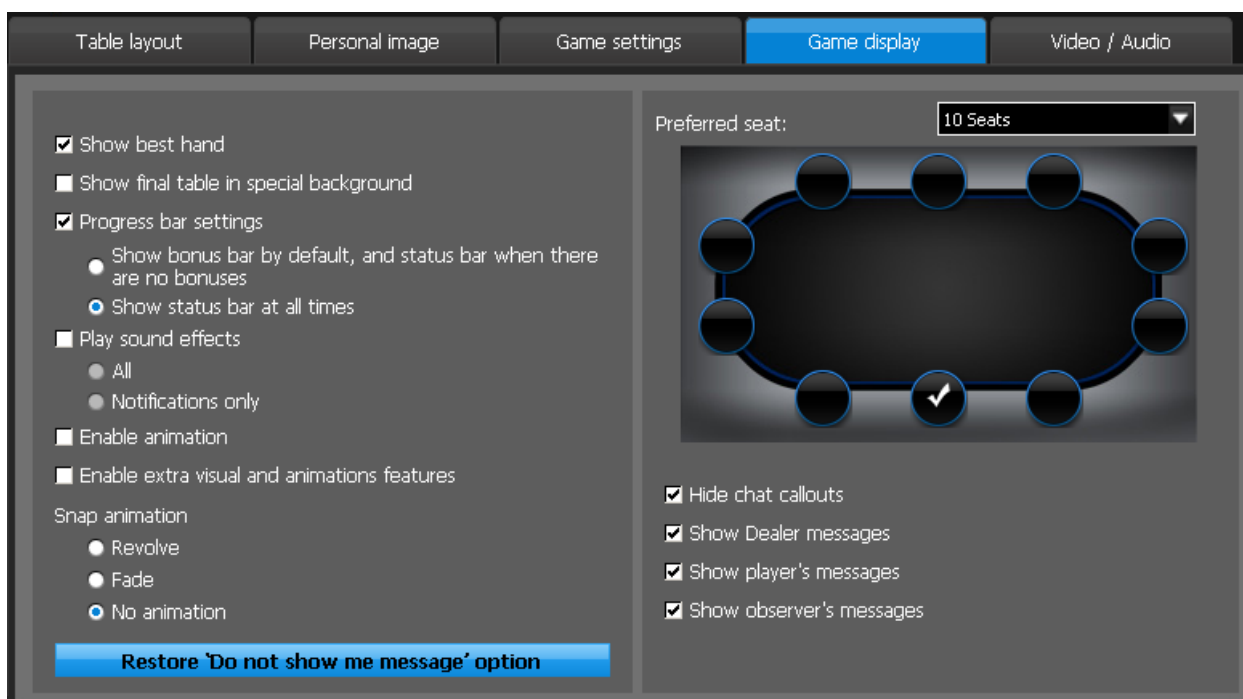

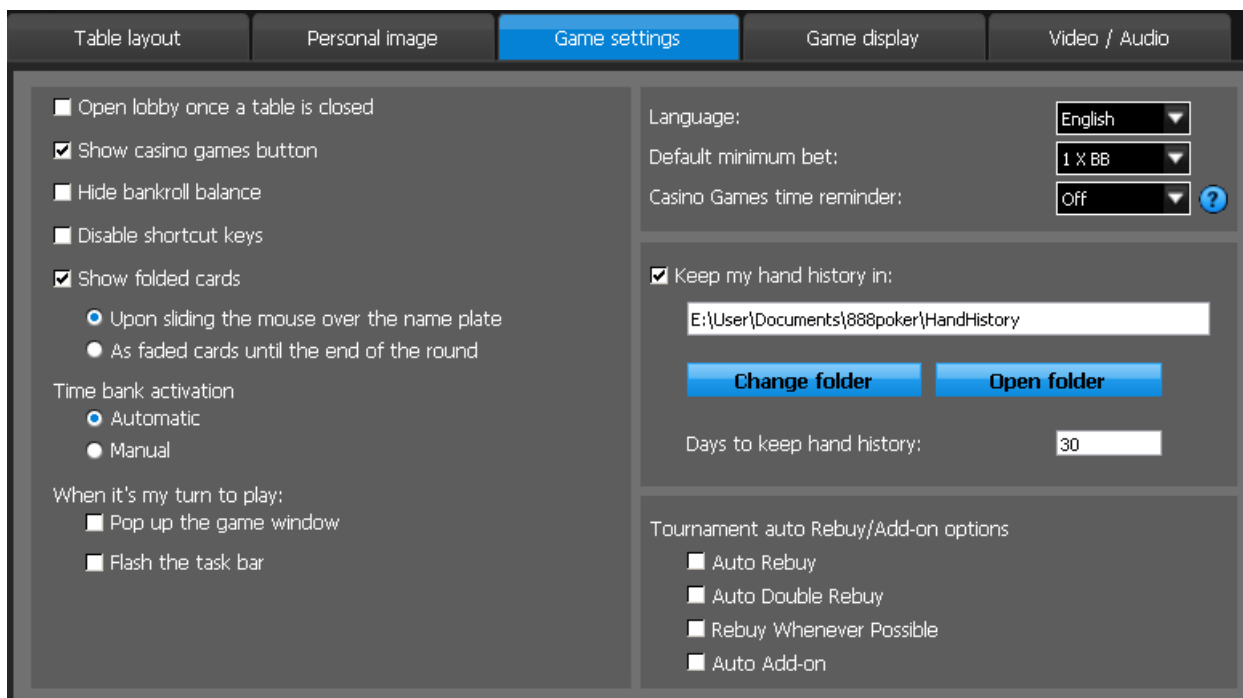

And restart poker client

Disable “Use Progressive KO theme”

When playing tournaments, you will need to run special utility to kill some pop-ups, called “888_popup_clicker.exe”. You can find it in the same folder with this instruction. Always run it “as administrator” If you are using any external hopper/loader, that already handles those pop-ups, no need to run this utility.

There is common situation that happens often in 888 games: when someone was allin in previous hand, his balance appears as zero for a few seconds when new hand starts, so bot can “think” he is allin and make incorrect decision. That’s why it is recommended to set Warbot -> Preferences -> Autoplayer -> Stable frames required to 5 and Scraper -> Scraper delay to 500. It will make your bot act longer, but gameplay will become more stable.

Finally, your tables should look like this:

Or this (different client version):

Download and run "888_resizer.exe", located in this FTP folder
