

Betonline Settings

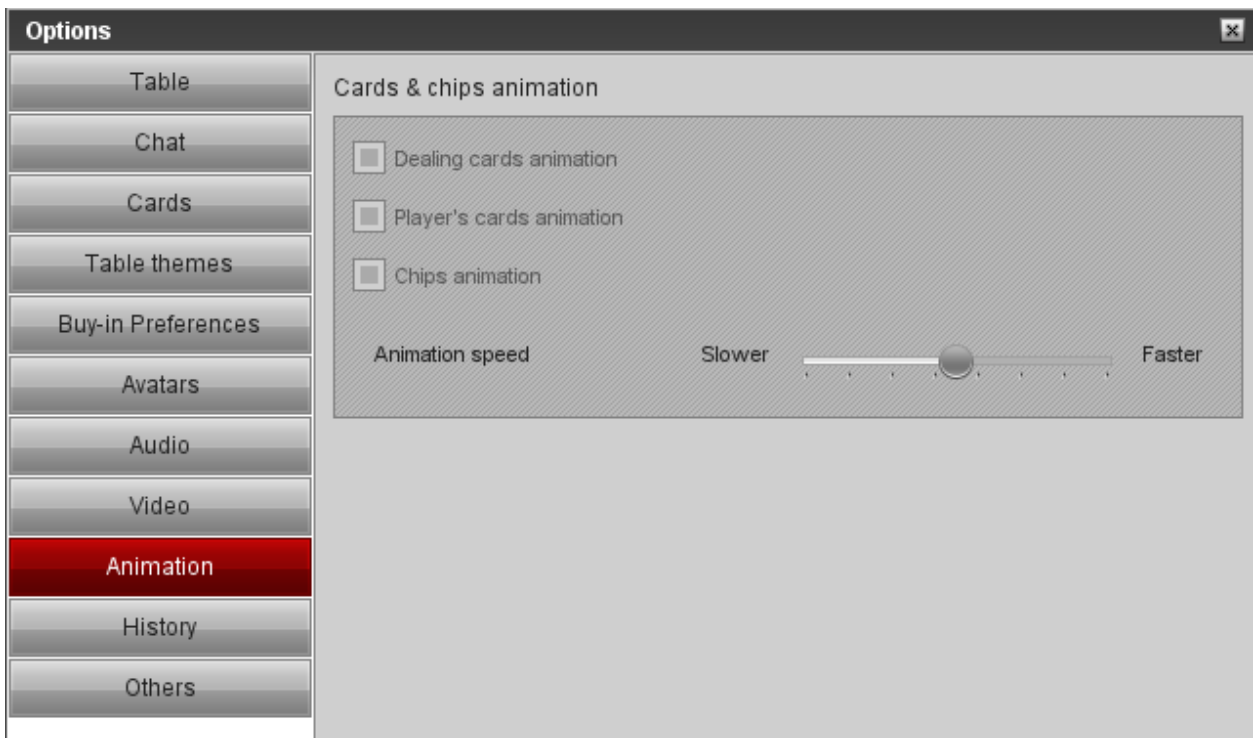

for Warbot (<https://www.warbotpoker.com>)

Latest update broke Betonline scraping in Win10/Win8. It works only with Win7 (use real pc, not VM!).
Set "OpenGL_software" driver in video settings of Betonline.

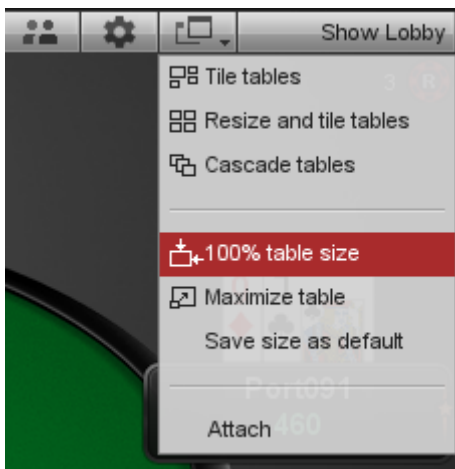

Set default table size and don't change it:

Don't use "player notes", because it will color opponent's seat and there is a chance for errors!

Attention: depending on your video card and video driver, you might need alternative tablemaps for Betonline (if bot can't read cards and fonts). You can find it in *BOL_Alt.zip* file inside this folder. Download and unpack it to your Warbot/scraper folder and replace default tablemaps.

Possible MTT functions for OpenPPL language:

mtt_average_stack, mtt_largest_stack, mtt_my_rank, mtt_number_entrants, mtt_players_remaining, mtt_smallest_stack
